EWD CHECK-UP

Inspection & Updates

EWD Inspection

Inspection of the installation and machine by our service specialists.

This package includes:

- Check-up of the EWD software by a software engineer
- Review of the wear parts and operating material as well as of the spare parts list resp. of the spare parts stock of the mill
- Recommendation for maintenance plans
- Review of the existing safety devices
- Final report with recommended actions

EWD Machine update

The EWD Machine update includes the EWD inspection and is the basis for our future-orientated recommendation. Adapted to the needs of the customer an analysis of the existing system is carried out from the following aspects:

- Software update
- Update of the user-friendliness / HMI
- Mechanical/electro technical conditions
- Operating safety
- Emissions (dust, noise, etc.)

Final report with recommended actions for a plant modernization.

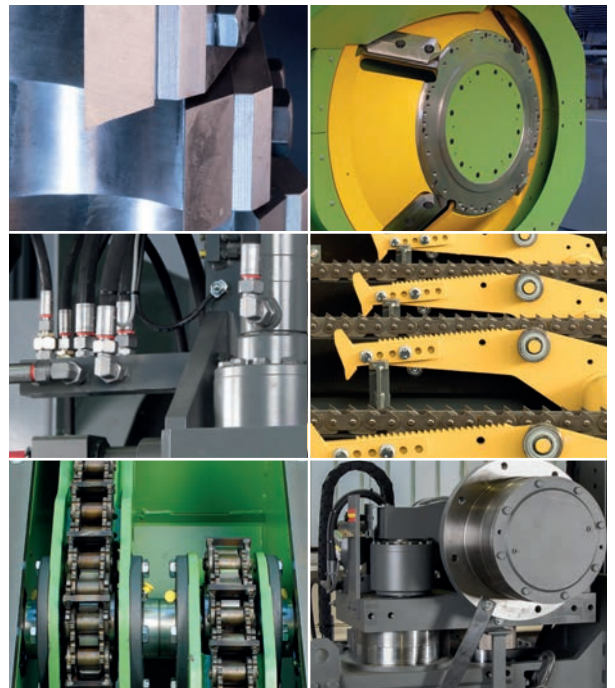

EWD Plant update

Well equipped for the future with EWD.

An investment in the future needs the optimum bases.

In conjunction with the sales department EWD offers a meaningful decision-making tool by means of the following analyses:

- Analysis of potential
- Adaption to market requirements
- Analysis of profitability
- Process simulation
